Notes:
1. Tanks containing acid solution are covered and ventilated to a common gas scrubber operated with NaOH solution.
2. In some cases, gypsum can be disposed as a slurry into a leach or CCD circuit.
3. Copper is precipitated as chalcocite solid (Cu₂S).
4. Hydrogen cyanide dissolved in aqueous solution is designated as HCNₐq.
5. Copper in leach solution is often present as predominantly Cu(CN)₃⁻².
6. Pregnant or barren leach solution can be treated by SART.
7. Fresh water can be used in the filters to wash residual cyanide & metals values.
